

Jon Beaulieu

Senior Software Engineer

hello@jonbeaulieu.com

Chicago, IL

[LinkedIn](#)

Summary

Passionate full-stack developer with nine years of experience in building products along the software stack, from backend systems to customer-facing user interfaces. Experienced with modern tools and best practices. Eager for new experiences with software architecture, modeling, and cloud computing.

Experience

2021 - Present

Senior Cloud Software Engineer – Zego

Member of a small agile team, focused on designing internal infrastructure and customer applications to support Zego's property management platform.

- Contributed to the design and implementation of an identity management system, with the goal of unifying customer identities between two existing systems. Used event-driven flows with Kafka and Debezium to track updates to user details and match them across legacy systems.
- Implemented a subscription system built with .NET microservices, to allow residents to purchase insurance through Zego's platform. Managed data across Postgres and S3. Used Temporal workflows to manage events over the course of subscription lifetimes.
- Implemented and launched a real-time messaging application to promote communication between property managers & residents. Leveraged .NET APIs with a SignalR hub to provide live updates to a React frontend. Used AWS Lambdas and SNS to support delivery via email and push notifications.

2019 - 2020

IoT Program Leader – Regal Rexnord

Led a new product development team responsible for designing and testing commercial IoT prototypes.

- Served as a software lead for the design of a modular IoT solution. Developed a smart hub capable of connecting to legacy commercial motor products, giving them cloud-connected capabilities.
- Supervised the rollout of Azure to unify Regal's IoT products under a single cloud infrastructure.

2017 - 2019

Software Design Engineer – Regal Rexnord

Worked across business units to learn backend development, embedded software, and mobile app design

- Built proof-of-concept IoT solutions for electric motor products, such as on-device user interfaces written using Python QT, and connected web applications for real-time monitoring.
- Led the redesign of the mobile application for an IoT pool pump system. Delivered an efficient web backend using Express & Node.js, and a fresh mobile app for customers using React Native.

Education

Massachusetts Institute of Technology – B.S., Electrical Engineering + Computer Science

Skills

- *Languages:* .NET (C#), Javascript/Typescript, C/C++, SQL, Python, Java, Kotlin
- *Tools:* React, Node.js, AWS, Kubernetes, Temporal, Okta, Redis, MongoDB
